

Climate change is one of the biggest threats to human health in the 21st century, and poses increasingly visible and intensifying challenges. Healthcare providers need to act now before unforeseen shocks turn this issue into a burning platform.

Five benefits should galvanize healthcare providers to act now

Reduced disruption to facilities, staff, and supply chains during extreme weather

patients and staff displaced due to 2018 wildfires in British Columbia and Alberta, Canada

Effective responses to changing demand as climate impacts worsen disease burden

spread of dengue fever in India on the back of a severe heatwave

Support for health equity by making patients and employees less vulnerable to crises

Increased frequency of extreme weather events in the US, with 40% more extreme weather events in 2018 than in 2017

Attracting employees and consumers as they increasingly screen for ESG performance

of healthcare providers

Improved access to capital and contracts as ESG metrics influence decisions

by 2025

[Redacted text]

Healthcare providers need a systematic approach to better understand how an evolving climate context impacts their assets and operations. A comprehensive analysis of threats and shifts is critical for mapping and prioritizing risks and embracing new opportunities.

Strategies for resilience
